

WALMSLEYS BUSINESS DEVELOPMENT IN THE SECOND-HAND MARKET

Walmsleys has recognised the increasing demand for the supply of second-hand machines and components for manufacturing and processing of paper and board. To that aim we have developed a service to provide efficient and knowledgeable sales and marketing services for the worldwide Pulp and Paper Manufacturing Industry.

Our experienced professionals can acquire, market, sell, and arrange dismantling and transport services of surplus and used pulp and paper equipment to meet the ever changing needs of the global pulp and paper manufacturing market:

The next part of our service is to offer machine refurbishment and/or updating, so that these components are as efficient as possible before reinstallation. This service is offered from our web site, where Interested customers, can view photo galleries and Key machine data, before making initial contact.

In addition to our extensive knowledge of the global market in the machinery we also offer equipment valuation services where necessary.

If you are in search of specific equipment and do not find anything on our website, please let us know and we will try and find it for you. The status of used equipment changes quickly and our relationships around the world, provides us with a large base from which to locate the equipment for our customers.

To date Walmsleys have carried out the dismantling and transporting of second-hand equipment for five major clients in Sweden, Denmark, Saudi Arabia, South Africa and Pakistan.

“This is an obviously expanding opportunity” emphasises Andrew Wilkinson, Operations Director for Walmsleys, “and with our proven experience in Machine Refurbishment, Reconfiguration and Machine Start-up Services we are able to offer our customers a complete ‘turn-key’ relocation package.”

For further information visit our Second-hand website pages @ http://www.walmsleys-uk.com/pm_for_sale.html.
